

Application effect:

Suitable for light metal, non-ferrous metal, hard plastic and other precision parts. Remove burrs, chamfering, polishing, cleaning and other functions. For irregularly shaped parts, hole shape, tubular corner, cracks can be polished. Polishing process is without manual intervention, custom time, processing speed, simple and safe operation

Single package: single magnetic polishing machine (including the host and a polished barrel)

220V voltage is Chinese, use and other uses 220V voltage can be used The voltage of 110V is mainly in the United States and other countries using the, China in Taiwan province is 110V

Barrel dimension: 180\*100mm      capacity: 600g Needle + workpiece

Machine size: 280\*260\*400mm

up to a maximum amount of polishing: 350g

Weight: 10KG voltage: customizable 110V, 220V

Speed: 2000rpm bidirectional rotary polishing

barrel barrel polishing machine

Magnetic polishing machine: magnetic polishing machine polishing machine belongs to the wash type, through the magnetic attraction

needle on the workpiece friction to the polishing effect, loss of the workpiece is relatively small, suitable and precious metal polishing, Suitable for light metal, non-ferrous metal, hard plastic and other precision parts Remove burrs, chamfering, polishing, cleaning and other functions For irregularly shaped parts, hole shape, tubular corner, cracks can be polished

Custom time, processing speed, simple and safe operation of one person can operate more than one Taiwan Polishing without dead ends, the capacity of the magnetic polishing machine is relatively small, KT-185 can only be polished up to a maximum of 300g workpiece, polishing process without manual intervention.

Barrel polishing machine: barrel polishing machine is through the drum rotation to produce intense friction with the workpiece so as to achieve the effect of abrasive polishing, loss on the workpiece is relatively large, suitable for non precious metal polishing, realize deburring, chamfering, polishing, cleaning and other functions

For irregularly shaped parts, hole shape, tubular corner, cracks can be polished

Custom time, processing speed, simple and safe operation of one person can operate more than one Taiwan
